

Alternatively, you can pass an id for the container using

`Container::make($type, $id, $title)`, where:

Parameter	Description
<code>\$type</code>	Identifier of the container type (accepted values are <code>post_meta</code> , <code>term_meta</code> , <code>user_meta</code> , <code>comment_meta</code> , <code>nav_menu_item</code> and <code>theme_options</code>).
<code>\$id</code>	Unique id of the container. Automatically prefixed with <code>carbon_fields_container_</code>
<code>\$title</code>	Title of the container.
